

What is claimed as new and what is desired to secure by Letters Patent of the United States is:

1. A dress shirt comprising:
 - a collar portion for generally fitting around a neck of a person;
 - a front portion having a centrally disposed longitudinal axis and including a plurality of opposed outer edge portions spaced substantially equally and outwardly from the longitudinal axis, said front portion having a top portion connected to said collar portion and further having a bottom portion spaced from said top portion and disposed generally about a waist of a person;
 - a back portion connected to said collar portion and extending downwardly therefrom, said back portion having a bottom portion ending above said bottom portion of said front portion; and
 - means for removably securing said back portion and said front portion in a stable position on a person.
2. The dress shirt of claim 1, wherein said front portion comprises:
 - a plurality of inner edge portions aligned generally parallel to the longitudinal axis and overlap each other.
3. The dress shirt of claim 2, wherein one of said plurality of inner edge portions includes a plurality of slots spaced from each other generally parallel to the longitudinal axis, another of said plurality of inner edge portions includes a plurality of fastening members spaced from each other generally parallel to the longitudinal axis and substantially aligned with said plurality of slots for interlocking therewith respectively.
4. The dress shirt of claim 1, wherein the top portion of said front portion has a width that is greater than a width of the bottom portion thereof.

5. The dress shirt of claim 1, wherein said plurality of outer edge portions converge downwardly towards each other and end at the bottom portion of said front portion and generally at the longitudinal axis.
6. The dress shirt of claim 1, wherein said securing means comprises a first elastic strap having a first end portion connected to one of said plurality of outer edge portions, said first strap having a second end portion removably attachable to another of said plurality of outer edge portions.
7. The dress shirt of claim 6, wherein said securing means further comprises a second elastic strap having a first end portion connected to said back portion and extending downwardly therefrom towards a waist of a person.
8. The dress shirt of claim 1, wherein said bottom portion has a substantially arcuate shape.
9. The dress shirt of claim 8, wherein the first and second end portions of said first strap each includes a Velcro portion for connecting to each other.
10. A dress shirt comprising:
a collar portion for generally fitting around a neck of a person;
a front portion having a centrally disposed longitudinal axis and including a plurality of opposed outer edge portions spaced substantially equally and outwardly from the longitudinal axis, said front portion having a top portion connected to said collar portion and further having a bottom portion spaced from said top portion and disposed generally about a waist of a person said front portion further includes a plurality of inner edge portions aligned generally parallel to the longitudinal axis and overlap each other, one of said plurality of inner edge portions includes a plurality of slots spaced from each other generally parallel to the longitudinal axis, another of said plurality of inner edge portions includes a plurality of fastening members spaced from each other generally

parallel to the longitudinal axis and substantially aligned with said plurality of slots for interlocking therewith respectively;

a back portion connected to said collar portion and extending downwardly therefrom, said back portion having a bottom portion ending above said bottom portion of said front portion; and

means for removably securing said back portion and said front portion in a stable position on a person, said securing means includes a first elastic strap having a first end portion connected to one of said plurality of outer edge portions, said first strap having a second end portion removably attachable to another of said plurality of outer edge portions.

11. The dress shirt of claim 10, wherein the top portion of said front portion has a width that is greater than a width of the bottom portion thereof.

12. The dress shirt of claim 10, wherein said plurality of outer edge portions converge downwardly towards each other and end at the bottom portion of said front portion and generally at the longitudinal axis.

13. The dress shirt of claim 10, wherein said securing means further comprises a second elastic strap having a first end portion connected to said back portion and extending downwardly therefrom and towards a waist of a person.

14. The dress shirt of claim 1, wherein said bottom portion has a substantially arcuate shape.

15. The dress shirt of claim 8, wherein the first and second end portions of said first strap each includes a Velcro portion for connecting to each other.

16. A dress shirt comprising:
a collar portion for generally fitting around a neck of a person;

a front portion having a centrally disposed longitudinal axis and including a plurality of opposed outer edge portions spaced substantially equally and outwardly from the longitudinal axis, said front portion having a top portion connected to said collar portion and further having a bottom portion spaced from said top portion and disposed generally about a waist of a person said front portion further includes a plurality of inner edge portions aligned generally parallel to the longitudinal axis and overlap each other, one of said plurality of inner edge portions includes a plurality of slots spaced from each other generally parallel to the longitudinal axis, another of said plurality of inner edge portions includes a plurality of fastening members spaced from each other generally parallel to the longitudinal axis and substantially aligned with said plurality of slots for interlocking therewith respectively, the top portion of said front portion has a width that is greater than a width of the bottom portion thereof;

a back portion connected to said collar portion and extending downwardly therefrom, said back portion having a bottom portion ending above said bottom portion of said front portion; and

means for removably securing said back portion and said front portion in a stable position on a person, said securing means includes a first elastic strap having a first end portion connected to one of said plurality of outer edge portions, said first strap having a second end portion removably attachable to another of said plurality of outer edge portions, said securing means further includes a second elastic strap having a first end portion connected to said back portion and extending downwardly therefrom and towards a waist of a person.

17. The dress shirt of claim 16, wherein said plurality of outer edge portions converge downwardly towards each other and end at the bottom portion of said front portion and generally at the longitudinal axis.

18. The dress shirt of claim 16, wherein said bottom portion has a substantially arcuate shape.

19. The dress shirt of claim 16, wherein the first and second end portions of said first strap each includes a Velcro portion for connecting to each other.
